

# Problem of birth rate in the Kaluga region

Number of births in the Kaluga region and prognosis

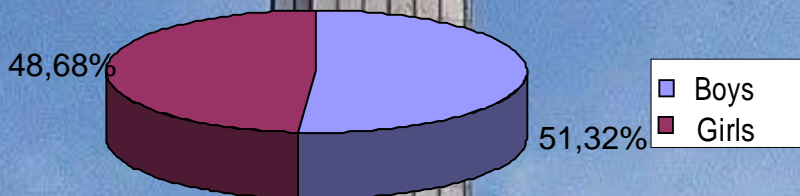

The natural population growth is negative. The population declines. On average, every year the rates of growth in Kaluga are getting smaller by 302 people

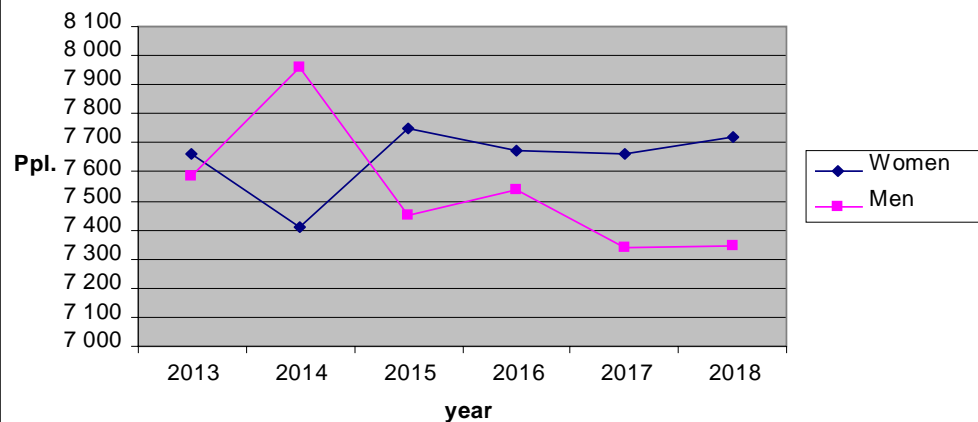

The natural population growth in the Kaluga. (1000 ppl.)

The percentage of birth rate ratio between the two genders in the Kaluga region

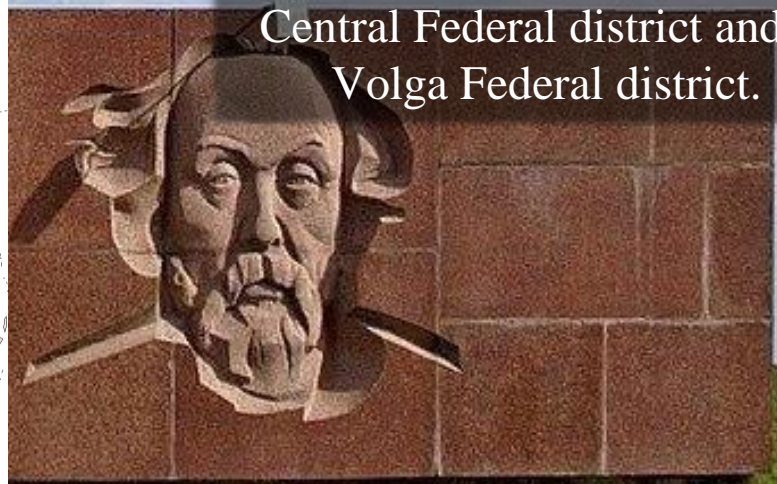

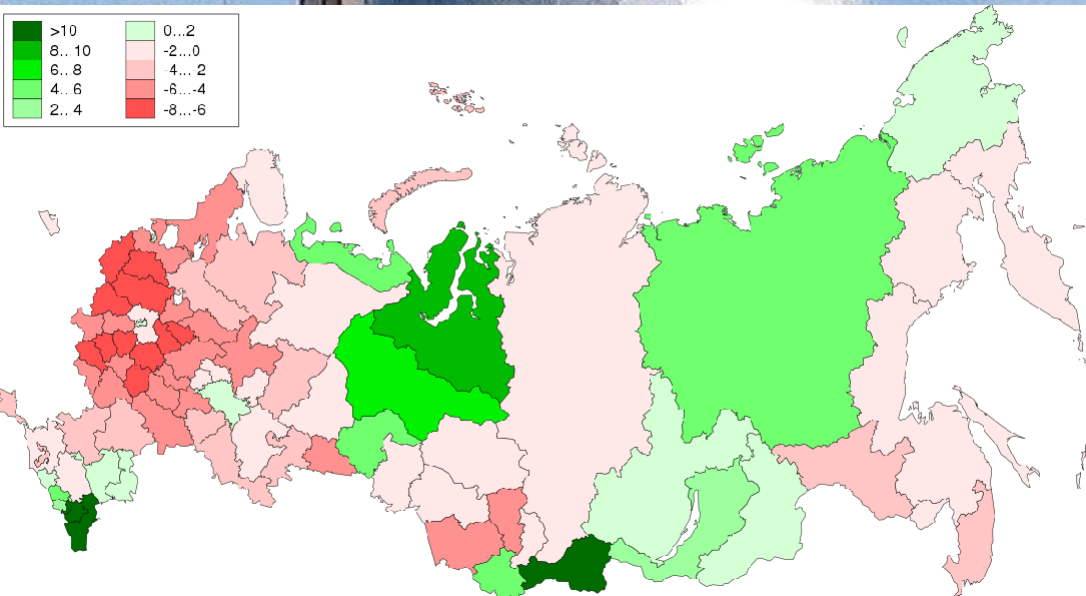

Number of male and female deaths in the Kaluga during the period 2013-2018.

Number of male and female deaths is not the same. Over the past few years, the number of women who have died has increased.

Kaluga region has a low birth rate. the same situation is in the Central Federal district and in Volga Federal district.

The government should increase social support for families with children.
